Boston, USA

Dr. Lubenau will give a presentation entitled, "**Oral T-Cell Therapies for Personalized Neoantigen-Targeting Treatment,**" during the session, "Clinical & Translational - Interrogating the Best Manufacturing Platforms to Reduce Needle to Needle Time," on November 22 at 11 AM ET. The program can be found [here](#).

About VAXIMM

VAXIMM is a privately held, Swiss/German biotech company that is developing oral T-cell immunotherapies for patients suffering from cancer. VAXIMM's product platform is based on a live attenuated, safe, orally available bacterial vaccine strain, which is modified to stimulate patients' cytotoxic T-cells to target specific structures of the tumor. The Company has a pipeline of complementary development candidates targeting different tumor structures. The most advanced product candidate, oral VXM01, activates killer T-cells targeting tumor-specific vasculature and certain immune-suppressive cells, thereby increasing immune cell infiltration in solid tumors. VXM01 is currently in clinical development for several tumor types, including brain cancer. VAXIMM also has a neoantigen program (VXM NEO) currently in preclinical development; the Company's platform allows for the fast generation and delivery of personalized T-cell cancer vaccines and may overcome key issues faced by other neoantigen approaches. VAXIMM has a collaboration agreement with China Medical System Holdings (CMS), granting CMS full rights in China and other Asian countries (excluding Japan) to VAXIMM's existing programs. CMS has made an equity investment in VAXIMM; the Company's other investors include BB Biotech Ventures, M Ventures, Sunstone Capital and BioMed Partners. VAXIMM AG is headquartered in Basel, Switzerland. Its wholly owned subsidiary, VAXIMM GmbH, located in Mannheim, Germany, is responsible for the Company's development activities.
